

About us

HanseEscrow Management GmbH is a fiduciary escrow agency with a flexible security concept for investments in construction data (e.g., design specifications) and software. Our consulting and escrow services are aimed both at licencees and at manufacturers. Our core business is holding software source code and technical data like construction plans in trust, verifying such deposits for completeness and keeping them up to date with current program releases.

Our Strategy

What makes us different from other agencies in the escrow field is our qualified view of technologies and processes. Our goal is not to establish “absolute security” at any cost, but to provide customized escrow packages to fit our clients’ specific risk situations. This requires a technically qualified analytical approach that recognizes and protects the interests of all stakeholders.

The Decisive Factor

Our services include more than just the safe deposit of data. We examine the escrowed data to ensure that it can be understood, maintained and modified by a qualified engineer or programmer. That is what we call active escrow management. We are the foremost provider of audited escrows in Europe, Asia Pacific and Africa.

HanseEscrow relies on long-term partnerships, for example, with TÜV Information Technologies (TÜViT, a member of the TÜV NORD Group), an accredited, neutral and international organization.

HanseEscrow Management GmbH was selected by Microsoft Corporation as a “Featured Escrow Company” in the “Certified for Microsoft Dynamics” program.
