

Development Due Diligence

The software audit we recommend if you plan to acquire a product or company.

The Development Due Diligence module appeals mostly to companies that want to purchase an existing software product (and possibly also acquire the company that produces it) in order to market and resell the software.

In this case, an exact audit of the software components plays an important role in addition to the financial and legal due diligence. The following points are the main focus in Development Due Diligence:

- Software development process
- Programming policy and guidelines
- Source code quality
- Documentation
- Management and policies

Together with the experts from HanseEscrow, the buyer chooses which items are to be included. We then present you with an offer that meets your individual needs.

Standard Escrow Verification	Pluspackage Process
generation of object code	assessment (subset of SPICE)
installation	Pluspackage Sourcecode
smoketest	tool-supported source code evaluation

source code review (samples thereof)	Additional Evaluations
audit process (deviation analysis)	test concept

#	Escrow Service	Period	Price
3.x	selection of Inspection Standard Inspection Secure Plus Package Source Code Plus Package Process	per auditor and day	€1,400

Customer Feedback

"The neutral evaluation of the LeuTek assets was very important to us. Therefore, we insisted on an audit by a neutral third party. When LeuTek showed they were not worried about the prospect of technical due diligence by an escrow agency we were quite optimistic. HanseEscrow's expertise in combination with that of TÜV IT was excellent in addition to financial due diligence and a good basis upon which to make our decisions."

Bernhard Oberschmidt, USU Software AG
